

Project Title: Assessing retinal function as a potential early biomarker for Creutzfeldt-Jakob Disease (CJD)

Principal Investigator: Dr. Pei Ying Lee (The University of Melbourne)

Collaborators: (1) Dr. Laura Ellett (Florey Institute of Neuroscience and Mental Health); (2) A/Prof. Christine Nguyen (The University of Melbourne); (3) Prof. Steven Collins (Australian National CJD Registry, Florey Institute of Neuroscience and Mental Health)

Summary

- In a mouse model of CJD, there is reduction in retinal neuronal function in response to light at early symptomatic phase of the disease
- Retinal function presents as a potential non-invasive biomarker for CJD
